Coalesce Central - Release Notes - Version 1.3.2 - Released 11/22/2016

New Features

- **Support for 24-Hour Time Format.** The clock in the lower right corner of Coalesce can now be set to 24-hour time formatting via the Coalesce configuration panel or Coalesce Central.
- **RSS Feeds Added to the Coalesce Central *Message Center*.** Coalesce Central's Message Center can now accept RSS feeds as content for the bulletin message ticker posted to Coalesce. Bulletin messages can now show multimedia content from RSS feeds and animate between sources. An unlimited number of RSS feeds can be curated with existing messaging features.
- **Support for Coalesce Software Updates Behind the Firewall via Coalesce Central.** The 1.3 version of Coalesce Central can now deploy software updates behind a network firewall. This greatly improves the ease of updating Coalesce that does not directly have internet access due to network firewalls and provides more user control of release version updates.
- **In-Product Software Update Path for Coalesce Central.** Coalesce Central now provides a direct update path from within Coalesce Central when new versions become available.
- **More Configuration Options for *Quick Connect*.** In Coalesce Central, a new option exists to disable automatic connection to Coalesce when Coalesce client apps are downloaded directly from Coalesce.

Coalesce Central Fixes and Enhancements

- Coalesce Central efficiency enhanced to reduce CPU usage.
- Resolved issue where certain configuration options on Coalesce were not being saved properly.
- Fixed update messaging that might improperly warn of a downgrade when not actually downgrading.
- Resolved issue where updating with a Software Local Release (SLR) file might not update all Coalesce displays as intended.

Compatibility

1.3 Coalesce displays cannot be managed by pre-1.3 Coalesce Central. It is highly recommended to update Coalesce Central to software version 1.3 before updating Coalesce.
